

Visual Evidence Companion - Images, Charts and Accessible Descriptions

Document type	Media interpretation guide
Coverage	Cultural Infusion Atlas - synthetic research snapshot
Topics	images charts alt text accessibility trust regulatory table
Source inspiration	https://atlas.culturalinfusion.com/secure-diversity-inclusion-survey-trust/

This document is a synthetic test artifact derived from themes and publicly visible metadata in the supplied Atlas article. It contains paraphrase, explanatory expansion and invented scenarios. It is not legal advice, a real client record, or a substitute for the original source and linked academic paper.

Purpose

The source article contains several images and a regulatory table. Some image elements expose descriptive alternative text, while others use only the generic word Image. This synthetic companion provides explicit descriptions so Bob can answer questions about visual content when pixels are not available to the text-only ingestion pipeline.

Descriptions separate observable content from interpretation. They identify chart encodings, labels, relationships and caveats. They do not infer ethnicity, disability, gender or other identity traits from appearance.

Hero image description

Synthetic visual A is a wide editorial banner titled Why a Secure Diversity and Inclusion Survey is the Backbone of Trust and True Inclusion. It shows an abstract shield surrounding small coloured profile symbols connected to a survey form. A lock icon sits at the centre. The composition uses dark teal, coral and gold on a light background.

The image communicates protection around personal responses. It is illustrative, not evidence that a specific technical control exists. The title should not be read as a guarantee that any survey using a lock icon is secure.

Trust and reliability diagram

Synthetic visual B is a left-to-right flow diagram with four nodes: Privacy safeguards, Perceived trust, More candid participation, and More reliable organisational insight. Solid arrows show the article's proposed pathway. A dotted arrow from Prior organisational behaviour points to Perceived trust, indicating that technical safeguards operate within an existing trust context.

The caption reads Trust enhances participant honesty and response reliability. The diagram is conceptual and does not establish an effect size. It helps explain the mechanism described in the article.

Participation chart

Synthetic visual C is a grouped bar chart derived from the fictional extended paper. Completion rates are 48 percent for Basic notice, 59 percent for Purpose notice, 57 percent for Technical notice and 71 percent for Combined notice. A second series shows sensitive-item completion of 81, 86, 84 and 91 percent respectively.

The vertical axis runs from zero to one hundred percent. Bars use accessible patterns as well as colour. A note states that values are fabricated for retrieval testing and must not be attributed to real Cultural Infusion customers or the linked academic paper.

Regulatory world map

Synthetic visual D is a world map marking the jurisdictions discussed in the article: European Union, United Kingdom, Australia, New Zealand, Brazil, Canada, United States, California, China, Japan, South Korea, Singapore and South Africa. Regions are grouped by the briefing's research workflow, not ranked by privacy strength.

The map avoids a red-to-green compliance scale because legal regimes cannot be reduced responsibly to a single good-or-bad score. Selecting a region would reveal the named law, scope note, sensitive-data issue and a reminder to obtain current advice.

Regulatory table description

The source article presents a table with columns for reference, regulatory name, region and scope. Rows include FERPA, Australia's Privacy Act, HIPAA, PIPEDA, Japan's personal information law, South Korea PIPA, Singapore PDPA, South Africa POPIA, GDPR, Australia's Consumer Data Right, Brazil LGPD, the UK Data Protection Act, California CPRA, New Zealand's Privacy Act and China PIPL.

A screen-reader-friendly version should preserve row and column associations. On narrow screens, each row can become a labelled card rather than a horizontally scrolling block with ambiguous relationships.

Architecture image

Synthetic visual E shows survey responses entering an encrypted service, separating invitation identity from response content, then flowing to a thresholded analytics layer. Administrators access configuration through a different path. Audit logs flow to a protected monitoring account. Exports carry expiry and watermark controls.

The image illustrates defence in depth. It does not depict differential privacy, homomorphic encryption or federated learning as deployed components. Those technologies are evaluated in the technical guide, while the fictional decision record adopts simpler baseline controls.

Image ingestion rules

When crawling a real page, retain the source URL, image URL, nearby heading, figure caption, alt text, width and height. Generic alt text such as Image is not a useful description. A vision-generated caption should be labelled as generated and should avoid inferring sensitive attributes.

OCR is useful for text embedded in charts but should be checked against the visual layout. A chart description should include title, axes, units, series, key values, direction, uncertainty and any synthetic-data warning. Decorative images can be recorded without consuming retrieval context.
